ARKLINE HOME & OFFICE FURNITURE · WEBSITE

How a quotation gets from the customer to Arkline

Customers send a quote request from the website without creating an account. It is saved to Arkline's database and emailed to Arkline. The admin manages the project photos from a private admin page.

Customer asks for a quote, steps 1–7

Admin updates the gallery, steps A–D

Happens outside the website

When a customer asks for a quote

1. **Browses the website.** Sees the project gallery, adds chairs or tables to the quote list. No sign-up.
2. **Sends the quotation form.** Name, mobile or email, project type, a description and an optional reference photo.
3. **The request is saved.** The website checks the details, works out the price estimate from Arkline's own price list, and stores the request.
4. **The reference photo is stored privately.** Only Arkline can open it; the public can't.
5. **An alert email is prepared** with the customer's details, items and estimate.
6. **It lands in Arkline's Gmail.** Replying to it goes straight to the customer's email.
7. **Arkline replies within one business day** by phone or email with the formal quotation, as the form promises.

When the admin updates the gallery

A. **Opens the admin page** and signs in with Google (one click) or email and password. "Forgot password?" sends a reset link.

B. **Sign-in is checked** against the admin list. Any other account sees "Not an admin account".

C. **Uploads, trashes or restores photos.** New photos are shrunk to about 200 KB each before upload, so they load fast.

D. **The public gallery updates right away.** Deleted photos sit in Trash and can be restored.

Who can see what

Access rules live in the database itself, so they hold no matter which page asks.

INFORMATION	WEBSITE VISITORS	ADMIN
Gallery photos	View	Upload, trash, restore, delete forever
Quotation requests	No access	Read in email and in the Supabase dashboard
Customer reference photos	No access	7-day link in each alert email
Prices and catalogue	View	Changed by the developer in the code

Running cost: free plans to start

Every part runs on a free plan sized well above a local furniture shop's traffic.

SERVICE	JOB	FREE LIMIT	WHAT THAT MEANS FOR ARKLINE
Vercel	Hosts the website	100 GB transfer / month	Tens of thousands of visits a month
Supabase database	Stores quote requests	500 MB	Over 400,000 requests at under 1 KB each
Supabase storage	Stores photos	1 GB	About 5,000 photos at ~200 KB
Resend	Sends alert emails	3,000 / month, 100 / day	100 quote requests a day

The free Supabase project pauses after 7 days with no visits. Regular website traffic keeps it awake.

Vercel's free Hobby plan is for non-commercial sites. For a business site, budget for Vercel Pro (US$20 a month), or host the same site free on Netlify or Cloudflare Pages.

Status

DONE	Website, quotation form saving to the database, admin page with upload and Trash, Google and email sign-in with password reset.
NEXT	Connect Resend so alert emails start arriving. Until then, requests are saved and visible in Supabase.
NEXT	Publish on Vercel with the real web address, and add that address to the Google and Supabase sign-in settings.
LATER	A "Quotes" tab in the admin page, so the team can track each request without opening Supabase.
